

AltaPay & NetSuite Bundle Installation Guide

Through the partnership of AltaPay and NetSuite, we have made it much easier for you as merchant/developer to receive secure payments in your web shop. AltaPay is fully integrated with NetSuite platform via a bundle. All you have to do is to install the bundle, which will only take a few minutes to complete.

We will show you how to complete the installation through a step-by-step guide. Follow this guide to start accepting payments globally.

To make the set-up as smooth as possible for you, this installation guide is divided into following sections:

1. Prerequisites	2
2. Install the bundle	3
3. Enable the bundle	4
4. Configuration of AltaPay bundle	5
4.1.1. Credit/debit cards	6
4.1.2. Alternative payment methods	11
4.2. Address Verification System (AVS)	13
4.3. Reconciliation	15
5. FAQ	17
5.1. Where can I find the log files?	17
5.2. How can I retrieve logs for AltaPay troubleshooting?	17
5.3. How can I remove the gateway field in the payment processing profile?	20
5.4. How does fraud detection works?	20
5.5. How to access log files for the reconciliation process?	21
5.6. Payment method is not visible in NetSuite Web site	21
6. Change log	22

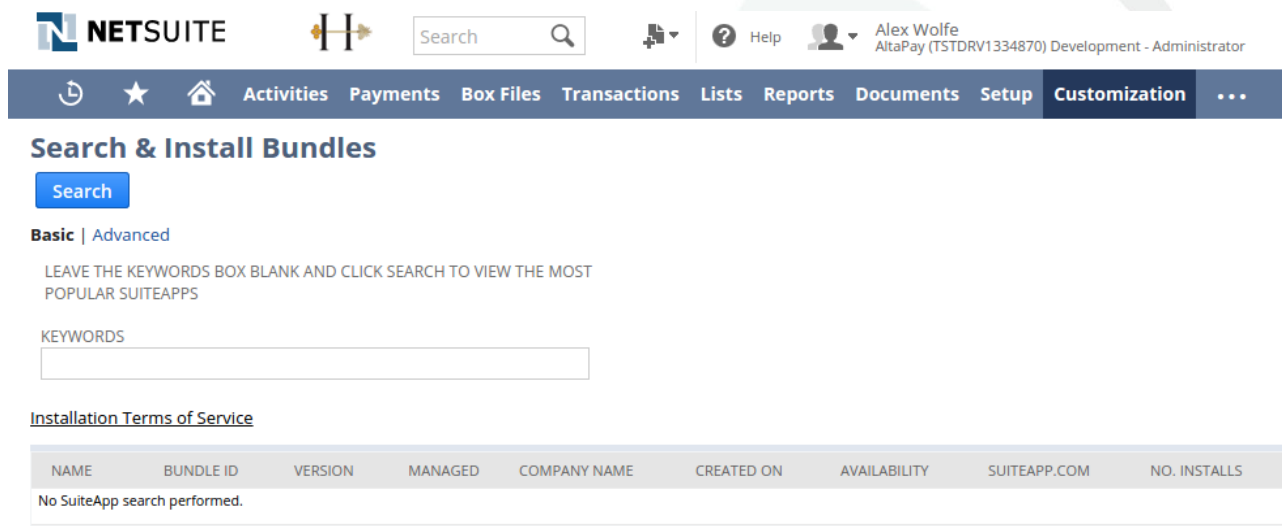

1. Prerequisites

We highly recommend to gather all the below information before starting the installation.

1. Prerequisites for installing the bundle
 - a. The bundle 'Payment Gateways' (ID 47196) needs to be installed on the merchant NetSuite account.
 - b. Be aware that due to NetSuite limitations consumers do not get informed if the transaction declines/fails. Only the merchant will be notified. This is only the case if NetSuite is used as a frontend.
2. Prerequisites for configuration of AltaPay bundle. AltaPay provides these.
 - a. AltaPay credentials
 - i. Username
 - ii. Password
 - b. AltaPay gateway information
 - i. Terminal
 - ii. Gateway
3. Prerequisites for fraud detection
 - a. Agreement with external fraud partner such as ACI ReD or MaxMind.

2. Install the bundle

Installing this bundle will enable your web site to handle card transactions through AltaPay's gateway.

Search & Install Bundles

[Search](#)

Basic | [Advanced](#)

LEAVE THE KEYWORDS BOX BLANK AND CLICK SEARCH TO VIEW THE MOST POPULAR SUITEAPPS

KEYWORDS

[Installation Terms of Service](#)

NAME	BUNDLE ID	VERSION	MANAGED	COMPANY NAME	CREATED ON	AVAILABILITY	SUITEAPP.COM	NO. INSTALLS
No SuiteApp search performed.								

1. Select the account, where you want to install AltaPay
2. Go to: Customization → SuiteBundler → Search & Install bundles
3. In the keywords field enter 'AltaPay'
4. Select 'AltaPay' (Bundle ID: 92258)
5. Click 'Install'
6. Follow the instructions. Note that this is a managed bundle and updates for the bundle is pushed from AltaPay.

3. Enable the bundle

You have now installed the bundle, but before continuing the configuration you need to be sure that the bundle is enabled.

1. Go to: Customization → Plug-ins → Manage Plug-ins

The screenshot shows the NetSuite interface. At the top, there's a navigation bar with the NetSuite logo, a search bar, and user information for Alex Wolfe. Below the navigation bar, there's a warning message: "WARNING: Plug-ins are generally designed to modify or supplement NetSuite business logic. When you enable a plug-in, standard NetSuite business processes may no longer run as expected, especially if you enable a plug-in developed by a third party. Therefore, make sure that you understand the impact on your NetSuite account before enabling a plug-in and ensure that use of the plug-in meets all of your security, regulatory, and other compliance obligations, including Payment Card Industry (PCI) Data Security Standards." Below the warning, the "Manage Plug-In Implementations" page is displayed. It has "Save" and "Cancel" buttons. Under the "Payment Processing" category, there is a section for "IMPLEMENTATIONS" with a checkbox labeled "ALTAPAY" which is checked.

2. Check if the AltaPay bundle is enabled. If not, check the checkbox.

4. Configuration of AltaPay bundle

In this step you can start configuring the AltaPay bundle, so it fits your web shop. This includes adding payment methods and configuring payments.

4.1. Add payment method

The standard configuration connects the bundle with the test gateway. Follow the below steps to connect the bundle with AltaPay's production gateway.

1. Go to Customization → Plug-ins → Plug-in implementations → Click on 'config.js' in the AltaPay bundle → Click 'Edit' → replace 'testgateway.altapaysecure.com' with the gateway information for your production environment (provided by AltaPay). Do not include 'https' → Press 'Save'.

The screenshot shows the NetSuite interface. On the left, the 'File' pane displays the 'config.js' file under 'SuiteScripts'. The 'Edit' button is highlighted with a red arrow. On the right, the 'CONTENT' tab shows the following code:

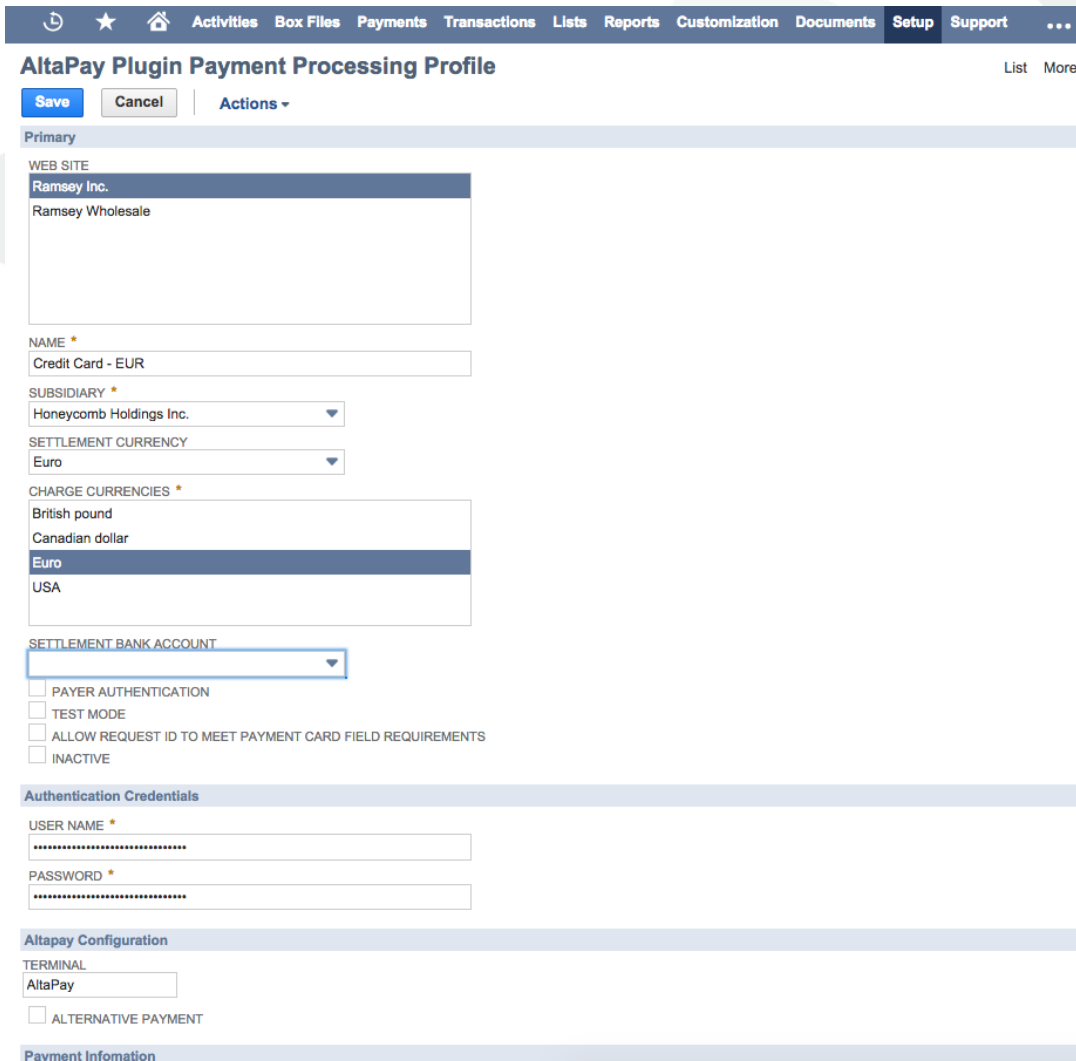

```
var gateway = 'testgateway.altapaysecure.com';

function getGwDomain()
{
    return gateway;
}
```

4.1.1. Credit/debit cards

In this step you add card as payment method in the web shop. For each currency you need to go through step 4.1.1.

1. Go to setup → Accounting → Payment Processing Profiles → 'Add AltaPay Plugin Profile'

The screenshot shows the 'AltaPay Plugin Payment Processing Profile' setup form. The form is divided into several sections: 'Primary', 'Authentication Credentials', 'AltaPay Configuration', and 'Payment Information'. The 'Primary' section includes fields for 'WEB SITE' (with a list of sites like Ramsey Inc. and Ramsey Wholesale), 'NAME' (Credit Card - EUR), 'SUBSIDIARY' (Honeycomb Holdings Inc.), 'SETTLEMENT CURRENCY' (Euro), 'CHARGE CURRENCIES' (British pound, Canadian dollar, Euro, USA), and 'SETTLEMENT BANK ACCOUNT'. There are also checkboxes for 'PAYER AUTHENTICATION', 'TEST MODE', 'ALLOW REQUEST ID TO MEET PAYMENT CARD FIELD REQUIREMENTS', and 'INACTIVE'. The 'Authentication Credentials' section has fields for 'USER NAME' and 'PASSWORD'. The 'AltaPay Configuration' section has a 'TERMINAL' dropdown (set to AltaPay) and an 'ALTERNATIVE PAYMENT' checkbox. The 'Payment Information' section is currently empty.

- a) Select which web sites the bundle should cover
- b) Add 'Name'. This is for internal use and will not be shown to customers. We recommend to name it 'Payment Method - Currency' (e.g. Credit Card - EUR).
- c) Select Subsidiary
- d) 'CHARGE CURRENCIES'. This must correspond with the currency of the terminal and only select one currency.
- e) Select Settlement Bank account. This is related to accounting and will not affect the settlement agreement with the acquirer.
- f) f. 'Authentication Credentials' → Add username and password. You will only be able to see asterisks, since they are password fields.
- g) 'AltaPay configuration' → Add terminal. Leave the 'Alternative payment' checkbox unchecked.
- h) 'Gateway Request Types' → Add the types that are needed for the terminal.
- i) Press 'Save'.

2. Go to Setup → Accounting → Accounting lists → New → Select 'Payment Method'
 - a. Select 'PAYMENT METHOD' → Name the payment method. This will be shown in the web shop.

- m. Save the file and make sure the 'Application-xxxx.js' and 'current.js' files have been regenerated

4.1.2. Alternative payment methods

If you support alternative payment methods (e.g. wallet, ePayment etc.) you can add the alternative web shop's payment methods by follow the below description. Please note that alternative payment as gift cards and some invoice providers (Klarna and Arvato) are not supported. Until March 2016 alternative payments is only available for web shops using SiteBuilder and NOT Suite Commerce Advanced. Support for Suite Commerce Advanced web shops will be available in March 2016 in NetSuite version 16.1. For each currency and payment method you need to go through step 4.1.2.

1. Go to setup → Accounting → Payment Processing Profiles → 'Add AltaPay Plugin Profile'

- c. Go to: Documents → Files → File Cabinet → Web Hosting Files → Live Hosting → site
- d. Click on 'Add file' and select the 'ns_form.html'

4.2. Address Verification System (AVS)

In order to control AVS cases, the checkbox "Enable AVS" must be clicked in the payment processing profile. Note that AVS must also be supported by the acquirer and is only supported by issuers in the US, Canada and UK.

In the "AVS ACCEPT" text box on the payment processing profile enter the AVS cases that should be accepted. Regarding the AVS cases that need to be put on hold, enter those in the text box "AVS HOLD". When entering the AVS cases, use uppercases and separate them by comma (e.g. A,B,D).

If an AVS result isn't in one of those two textboxes (Accept or Hold), the AVS result will be rejected and the order cancelled. If an AVS result is in both textboxes, the hold case has first priority.

AVS HOLD

Here is a list of AVS cases that can occur. As a merchant you will need to decide which cases should be accepted or put on hold. Otherwise the order will be rejected.

AVS	Description
A	Address matches, but zip code does not
B	Street address matches, post code not verified due to incompatible formats
C	Street address and postal code not verified for international transaction due to incompatible formats
D	Street address and postal codes match for international transaction
E	AVS not supported for this industry
F	Full Match - Address and Zip/Postal Code match (UK Only)
G	Address information is unavailable; international transaction; non-AVS participant
I	Address information not verified for international transaction
M	Street address and postal codes match for international transaction
N	No Match on Address (Street) or Zip
P	Postal codes match for international transaction. Street address not verified due to incompatible formats
Q	Unknown response from issuer/banknet switch
R	Retry. System unable to process
S	AVS not supported for this industry
U	Address information is unavailable
W	Nine-digit zip code matches, but address does not
X	Exact. Nine-digit zip code and address match
Y	Yes. Five-digit zip code and address match
Z	Five-digit zip code matches, but address does not

4.3. Reconciliation

Go to: Customization -> Scripting -> Scripts

There is several Scripts within NetSuite, so not all of these are related to the reconciliation process. Go to the script that has the name "Recon.js" and click either view or edit. Then there is a tab called "Execution log" and here you can find the log entries related to the fundings files and funding files alone.

These log entries are needed when you have any problems with the reconciliation and need to contact AltaPay support.

How to setup reconciliation in NetSuite

For each active AltaPay Payment processing profile in NetSuite, there needs to be a custom record, that is created here:

AltaPay reconciliation -> Reconciliation Setup -> Setup Accounts.

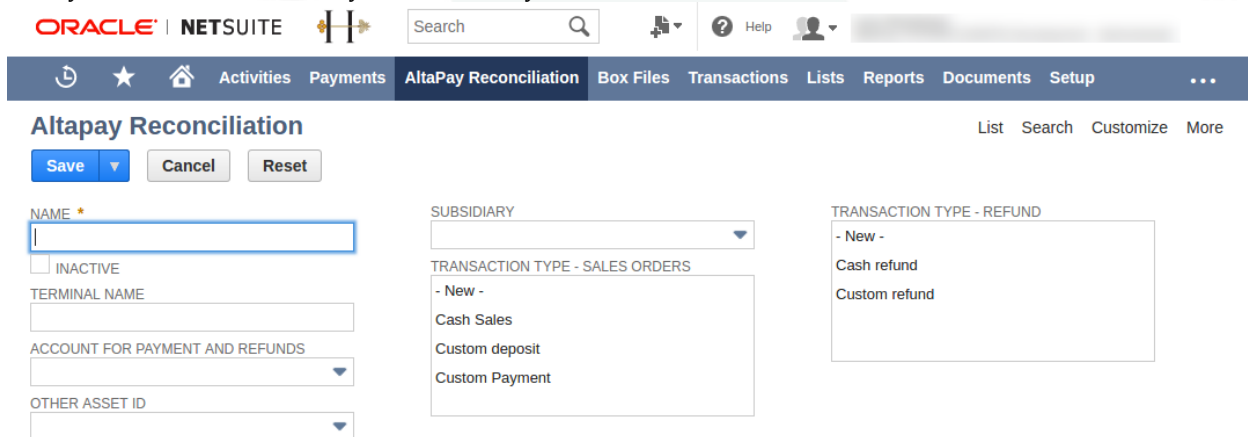

This will make sure reconciliation entries related to orders will be populated on the correct accounts. Here the terminal name have to match the terminal, which orders that needs to be reconciled.

In the "ACCOUNT FOR PAYMENT AND REFUNDS" field you would need to select the account where entries are related to the order (payment, refund), whereas in the "Other Asset Id" field entries are related to the flow of the transactions (refund/payment rejected, chargebacks (representment, pre arbitration)) that isn't capture/refund.

Transaction type:

- Sales order
 - Select the relevant record types that are related to Sales order.
- Refund
 - Select the relevant record types that are related to refund.

Subsidiary: select the same subsidiary "Account for Payment and refunds" is related

to.

There are also reconciliation entries that are not related to an order and needs to be populated on a different account. Here you would need to add these record types and decide which account they should be populated on. This can be done here:

AltaPay reconciliation -> Reconciliation Setup -> Setup record type.

Then add these (these are case sensitive):

- rolling
- fee
- adjustment
- roundoff
- not_found

Payment method:

Go to: Setup -> Accounting -> Accounting lists

Here the AltaPay payment methods should have the setting: "GROUP WITH UNDEPOSITED FUNDS".

How to upload funding files?

Download the funding files from the gateway. These can be found here: Finances -> Funding files. Download the files that you want to reconcile.

Login into NetSuite and then go to: AltaPay reconciliation -> Import data -> Upload files.

Click on the "Select file" and select a funding file that have been downloaded from AltaPay.

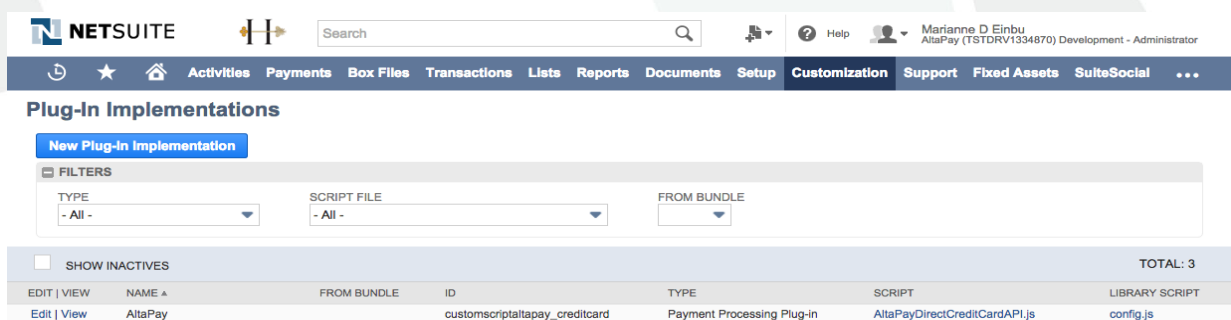

If the funding file was successfully handled, there will be a message "Funding files successfully handled" and there will be an option to upload another funding file. In the case funding data couldn't be populated within NetSuite, log entries will be shown, leading up to the error. For further details, see the log files.

5. FAQ

5.1. Where can I find the log files?

In the case where you experience an issue with the AltaPay bundle we would like you to provide us with the steps leading to the issue and a log file. You can access the log file by following three simple steps.

1. Go to: Customization → Plug-ins → Plug-in implementations
2. Click 'Edit' or 'View' beside 'AltaPay'

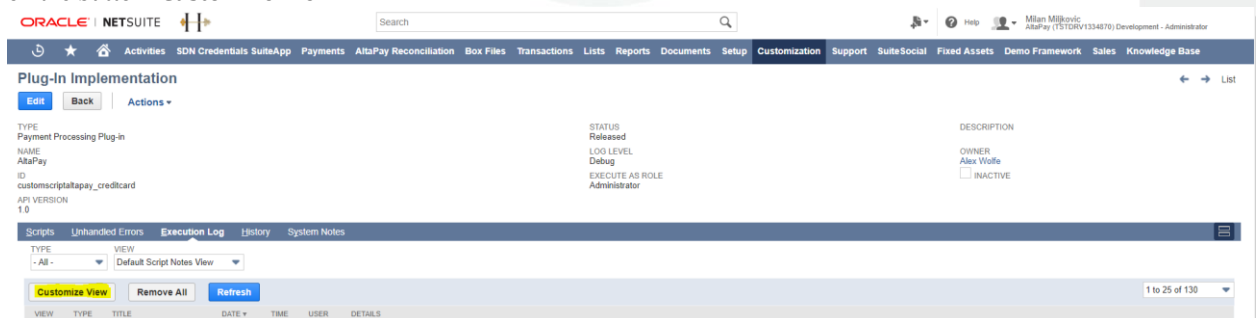

The screenshot shows the Netsuite interface for 'Plug-In Implementations'. The top navigation bar includes 'Activities', 'Payments', 'Box Files', 'Transactions', 'Lists', 'Reports', 'Documents', 'Setup', 'Customization', 'Support', 'Fixed Assets', 'SuiteSocial', and '...'. The 'Customization' tab is active. Below the navigation bar, there's a 'New Plug-In Implementation' button. A 'FILTERS' section shows 'TYPE' set to '- All -', 'SCRIPT FILE' set to '- All -', and 'FROM BUNDLE' set to '- All -'. A table lists the implementations with columns: EDIT | VIEW, NAME, FROM BUNDLE, ID, TYPE, SCRIPT, and LIBRARY SCRIPT. The table shows one entry for 'AltaPay' with ID 'customscriptaltapay_creditcard', TYPE 'Payment Processing Plug-in', SCRIPT 'AltaPayDirectCreditCardAPI.js', and LIBRARY SCRIPT 'config.js'.

3. Click on the tab 'Execution Log'

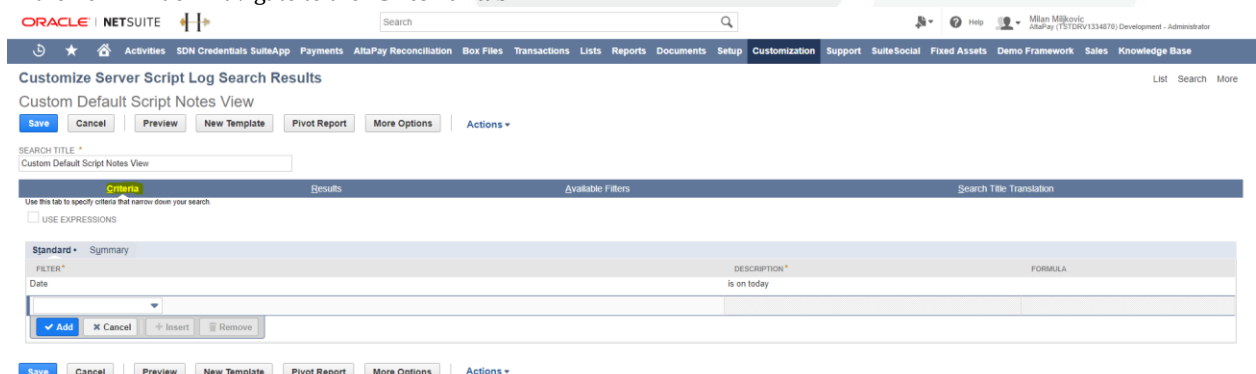

5.2. How can I retrieve logs for AltaPay troubleshooting?

1. To be able to filter and extract needed logs add filtering criteria to the logs view. This could be accomplished by clicking on the button "Customize View"

The screenshot shows the Netsuite interface for 'Plug-In Implementation'. The top navigation bar includes 'Activities', 'SDN Credentials SuiteApp', 'Payments', 'AltaPay Reconciliation', 'Box Files', 'Transactions', 'Lists', 'Reports', 'Documents', 'Setup', 'Customization', 'Support', 'SuiteSocial', 'Fixed Assets', 'Demo Framework', 'Sales', and 'Knowledge Base'. The 'Customization' tab is active. Below the navigation bar, there's a 'Plug-In Implementation' section with buttons for 'Edit', 'Back', and 'Actions'. The 'Execution Log' tab is selected. A table shows the log entries with columns: TYPE, NAME, ID, STATUS, LOG LEVEL, EXECUTE AS ROLE, DESCRIPTION, and OWNER. The table shows one entry for 'AltaPay' with ID 'customscriptaltapay_creditcard', TYPE 'Payment Processing Plug-in', STATUS 'Released', LOG LEVEL 'Debug', EXECUTE AS ROLE 'Administrator', DESCRIPTION 'AltaPayDirectCreditCardAPI.js', and OWNER 'Alex Wolfe'. A 'Customize View' button is visible.

2. In the new window navigate to the "Criteria" tab

The screenshot shows the Netsuite interface for 'Customize Server Script Log Search Results'. The top navigation bar includes 'Activities', 'SDN Credentials SuiteApp', 'Payments', 'AltaPay Reconciliation', 'Box Files', 'Transactions', 'Lists', 'Reports', 'Documents', 'Setup', 'Customization', 'Support', 'SuiteSocial', 'Fixed Assets', 'Demo Framework', 'Sales', and 'Knowledge Base'. The 'Customization' tab is active. Below the navigation bar, there's a 'Custom Default Script Notes View' section with buttons for 'Save', 'Cancel', 'Preview', 'New Template', 'Pivot Report', 'More Options', and 'Actions'. The 'Criteria' tab is selected. A table shows the search criteria with columns: FILTER, DESCRIPTION, and FORMULA. The table shows one entry for 'Date' with DESCRIPTION 'is on today' and FORMULA. A 'Customize View' button is visible.

- Set the days from when to extract needed logs. There is already included filter for the date filter with default value set to "today". To change this click on the "Set Description" button next to the "Date" filter

5.3. How can I remove the gateway field in the payment processing profile?

In the case, that there is a gateway filed in the payment processing profile, this can be ignored. But you can choose to remove the field by going to: Customization → Lists, Records & Fields → Record types. Then click on 'Altapay_Configuration' and then 'Gateway', you can now check the check box 'INACTIVE' and click 'Save'.

5.4. How does fraud detection works?

If fraud detection is enabled on the terminal, the AltaPay NetSuite app will follow the fraud detection recommendations. The following four recommendations are available:

1. 'Deny'

The transaction is denied and the order is cancelled as well. You can see the reason here:

- Find the order in question
- Go to the 'Payment' tab
- 'Payment events' → click 'View' and a new window appear
- 'Payment Status' → 'DETAILS' → here you can see the message for why the order was denied.

If you utilize a bespoke version of ReD, the reason for the deny recommendation can be located in the ReD CSI interface.

Good practice will be to release the payment in our backend. Debit cards do not contain reservations.

2. 'Challenge'

The transaction is on hold and the merchant will have to make a decision if they want to handle the order. If nothing is done the order will be hold in NetSuite. You can see the reason here:

- Find the order in question
- Go to the 'Payment' tab
- 'Payment events' → click 'View' and a new window appear
- 'Payment Status' → 'DETAILS' → here you can see the message for why the order is on hold.

If you utilize a bespoke version of ReD, the reason for the deny recommendation can be located in the ReD CSI interface.

In the case, that the merchant doesn't want to fulfill the order, they have to cancel the order. It will be good practice to release the orders in our backend, so there are no reservations on debit cards. If the merchant will handle this order, the merchant will have to 'Override the payment hold' and fulfill the order. The merchant can find the 'Challenge' orders here:

- a. Go to Transactions → Sales → Manage Payment Hold
 - b. Dropdown menu 'HOLD REASON' → select 'External Fraud Review' → a list of orders on hold is shown and from here you can accept or decline the order.
3. 'Accept'
 - a. This order will be accepted without any notice
 4. 'Unknown'
 - a. This can be due to technical problems at either AltaPay or the fraud company. The order will be handled as accepted.

5.5. How to access log files for the reconciliation process?

Go to: Customization -> Scripting -> Scripts

There is a several Scripts within NetSuite, so not all of these are related to the reconciliation process. Goto the script, that has the name "Recon.js" and click either view or edit. Then there is a tab called "Execution log" and here you can find the log entries related to the fundings files and funding files alone.

These log entries are needed, when you have any problems with the reconciliation and need to contact AltaPay support.

5.6. Payment method is not visible in NetSuite Web site

Check that Payment Visuals is set in the Payment Method

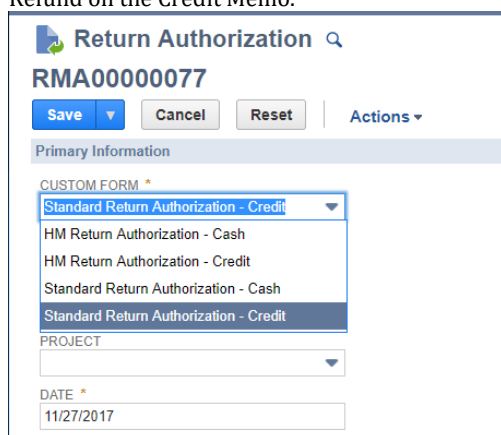

You can find detailed explanation in the Configuration of AltaPay bundle for Credit Cards 4.1.1 (Part 2: Setting up Payment Method) step F.

5.7. When making a refund, I'm getting "Credit not supported error" error

Please refer for solution on the following link:

https://system.netsuite.com/app/help/helpcenter.nl?fid=section_N1304530.html

Note: If you save a return authorization with "Standard Return Authorization - Credit" template a credit memo is created, and the credit card details no longer show on the Payment subtab even if you edit the form and change the template to "Standard Return Authorization - Cash" (Refer to the image below). The only way to create a cash refund for such return is by clicking Refund on the Credit Memo.

The screenshot shows the 'Return Authorization' form in NetSuite. The form ID is 'RMA00000077'. At the top, there are buttons for 'Save', 'Cancel', 'Reset', and 'Actions'. Below this is the 'Primary Information' section. Under 'CUSTOM FORM', a dropdown menu is open, showing several options: 'Standard Return Authorization - Credit' (which is highlighted), 'HM Return Authorization - Cash', 'HM Return Authorization - Credit', 'Standard Return Authorization - Cash', and 'Standard Return Authorization - Credit'. Below the dropdown, there are fields for 'PROJECT' and 'DATE' (which is set to '11/27/2017').

6. Change log

Version	Note
